Acknowledgments
This publication was written collaboratively in a writing workshop organised by WSSCC in February 2013 in Mumbai: The writers were: Lakshmi Murthy, Maria Fernandes, Vijay Gawade, Urmila Chanam, Vaishalli Chandra, Krishna Ramavat, Shivangini Tandon, Veda Zacharia, Vinod Mishra and Archanai Patkar (WSSCC). The publication also benefitted from the valuable inputs of staff at WSSCC, Geneva, including Zelda Yanovich, Andrew Kanyegirire, David Matthews, Varsha Sharma and David Trouba.

Disclaimer
This publication is jointly produced by the Water Supply and Sanitation Collaborative Council (WSSCC) and the Government of India (GOI). Any errors or omissions, however, remain the responsibility of WSSCC only. The comments and contributions made to this report by representatives from the water, sanitation and hygiene, reproductive and sexual health and education sectors in India and beyond are gratefully acknowledged. The publication also draws on already existing material on the subject.

A Boy’s Reproductive Organs

- Seminal vesicle
- Seminal Duct
- Penis
- Glans Penis
- Testis
- Semen
During adolescence and with the onset of puberty, important changes occur in a boy’s body and he experiences semenarche or his first ejaculation. This is commonly known as a wet dream.

Puberty is the process of physical changes by which a child’s body matures into an adult body capable of sexual reproduction. The major landmark of puberty for males is the semenarche, which occurs on average between the ages of 11-15.

What is semenarche?

At the onset of puberty, thick white fluid called semen comes out of the penis. This major change in a boy’s body is known as semenarche (first ejaculation) and this process is called ejaculation.

Lots of semen is formed inside the body and when there is too much – some semen is released.

During adolescence, boys sometimes experience these wet dreams.

Boys know that wet dreams are a normal part of the growing up process and that there is nothing to worry about.

As we grow, our body goes through many changes. These changes occur due to secretions in the body.

These secretions are called ‘hormones’ and are vital for growth and development.

What physical, emotional and social changes occur in a boy’s life, when he is growing up?

- Height gain
- Weight gain
- Acne
- Growth of hair on the body including a beard and moustache
- Development of the body
- Changes to the voice
- Penis development
- Semenarche
- Development of an Adam’s Apple (a bulge in the neck)
- Ambition
- Dreams
- Shyness
- Strong opinions
- Responsibility
- Individual desire
- Seeking independence and testing boundaries
During adolescence and with the onset of puberty, important changes occur in a girl’s body and she starts menstruating.

Puberty is the process of physical changes by which a child’s body matures into an adult body capable of sexual reproduction. The major landmark of puberty for females is menarche, the onset of menstruation, which occurs on average between ages 9–13.

What is Menstruation?
Each month, special chemicals inside the female body, called hormones, cause the body to release an egg from one of the two egg sacks, called ovaries.

Each month, about 10 to 20 tiny eggs start to ripen but only one or two eggs are released. The egg then travels to the uterus via the fallopian tubes.

The uterus, prepares for the egg with extra tissue and blood vessels, ready to support and nourish the growing foetus. Only if the egg meets sperm will it be fertilised and slowly develop over 9 months into a baby.

If the egg is not fertilised, it passes right through and just dissolves. The blood vessels and thickened lining of the uterus are no longer needed and form the menstrual flow, which escapes through the vagina. This is the menstrual period which lasts from 4 to 6 days.

Girls know that menstruation is a normal process and that it is nothing to worry about.
During adolescence boys and girls go through similar emotional changes.

**What else occurs during adolescence?**
- Feeling of responsibility
- Peer pressure
- Strong opinions or views
- Trying to form one’s own identity
- Individual desires

**Which emotions do they feel?**
- Curiosity
- Shyness
- Desires
- Rebelliousness
- Indecision
- Restlessness
- Dreams
- Stress
- Moodiness
- Ambition
- Vulnerability
- Sexual attraction
- Self-consciousness
- Feeling of responsibility
- Peer pressure
- Strong opinions or views

As a girl grows, her body develops and changes occur. These changes occur from the ages of 9 to 19.

This stage of a girl’s life is called ‘adolescence’.

After adolescence she will become an adult.
Boys
